Dalal Himanshu Janardhan

Test Analyst

📞 7588037281   ✉ himanshu.dalal0599@gmail.com   📍 Ahmedabad

Professional Summary

Experienced Test Analyst with over 3.1 years of expertise in testing web-based applications. Proficient in automation tools and frameworks including Selenium WebDriver, Java, TestNG, Cucumber. Demonstrates a strong ability to identify defects early in the development cycle, develop maintainable and efficient test scripts, and collaborate closely with cross-functional Agile teams. Skilled in using industry- standard tools such as Git, Jenkins, and JIRA for version control and defect tracking. Committed to enhancing software quality and accelerating delivery through effective automation strategies.

Skill

- SDLC
- STLC
- Sanity
- Agile

- Selenium WebDriver
- Core Java
- BDD Cucumber
- TestNG
- GitHub

Work Experience

Working as a Test Analyst at Stridely Solutions, Ahmedabad from Nov. 2022 to till date.

Professional Synopsis

- Strong in **Core Java** programming concepts with practical experience in **Selenium WebDriver** automation.
- Proficient in **object-oriented** programming (OOP) principles, applying them effectively in test automation.
- Expertise in using Selenium WebDriver for browser automation and functional UI testing.
- Skilled in developing stable, scalable, and maintainable automation scripts.
- Exposure to Web Services and REST APIs with experience in API testing.
- Proficient in scripting automated tests using **Java** and **Selenium** for web applications.
- Experienced in preparing traceability matrices to ensure complete test coverage.
- Proven experience in web application testing, with domain expertise in Ecommerce.

- Thorough knowledge of various testing types such as Smoke, Regression, GUI, Functional, Re-Testing, System Integration, and Cross-browser Compatibility Testing.
- Contributed to automation planning and prioritization under the guidance of automation leads.
- Practical knowledge of using Maven as a build and dependency management tool.
- Strong exposure to **SDLC** and **STLC** processes, with a focus on validation and QA practices.
- Well-versed in **Agile** methodologies and actively involved in sprint-based testing.
- Proficient in defect logging and tracking using tools like ScrumDo and JIRA.
- Good understanding of the **bug life cycle** and defect management processes.
- Capable of identifying bugs early in the development lifecycle to enhance product quality.
- Detail-oriented approach in script writing and test execution for accurate results.
- Experience in both front-end and back-end testing of applications.
- Ability to work independently with minimal supervision while ensuring task ownership.
- Collaborative team player with experience working in Agile and cross-functional teams.
- Excellent verbal and written communication skills with strong logical reasoning.
- Familiar with **GitHub** for version control and managing automation code repositories.
- Strong time management skills to meet tight deadlines without compromising quality.
- Analytical mindset with strong problem-solving skills for debugging and issue resolution.
- Demonstrates ownership and accountability in resolving test-related challenges.
- Adaptable in fast-paced environments with multitasking capabilities.
- Experience in designing and implementing automation strategies to reduce manual efforts.
- Capable of leading small teams and ensuring smooth communication and collaboration.
- Focused on enhancing software quality and efficiency through automation best practices.

Project

Project Title: FurniCart

Domain: Ecom

Roles & Responsibility:

- Performed **Automation Testing** for both customer and admin modules using Selenium WebDriver, ensuring functional coverage of critical flows like product browsing, cart, checkout, and order management.
- Utilized **Core Java** to develop reusable and maintainable automation scripts, following object-oriented programming principles.
- Designed and executed test cases based on **SDLC** and **STLC** phases, ensuring proper validation and verification at each stage.
- Implemented **BDD Cucumber framework** for behavior-driven testing by writing Gherkin-based feature files, making scenarios easily understandable for business and QA teams.
- Automated smoke, **sanity**, and regression test suites using **TestNG**, enabling faster feedback cycles during development sprints.
- Managed source code, test scripts, and automation framework in **GitHub**, enabling version control and smooth collaboration with the development team.
- Actively participated in **Agile ceremonies** such as sprint planning, daily stand-ups, and retrospectives, providing QA insights and updates on test progress.

- Maintained traceability between requirements and test cases by following structured practices as part of the **STLC** process.
- Validated UI elements, business logic, and workflows for modules like product listing, filters, cart updates, and admin inventory handling using **Selenium WebDriver**.
- Collaborated with developers to log and track bugs efficiently using ScrumDo, while verifying bug fixes through re-testing and regression.
